HOW DOES IT SUCK?

KEYSTONE XL

and the Tar Sands

The Keystone XL pipeline is TransCanada Corp.'s expansion to the Keystone 1, to bring Alberta Tar Sands crude to the Texas coast for export.

Tar sands oil is filthy, using 2 tons of tar sand and 2-5 barrels of water for a single barrel of oil. Just producing it makes over 3x the greenhouse gases of typical crude. We're already seeing climate chaos in droughts, super-storms, and more. The Keystone XL's flood of tar sands oil would make it worse. A lot worse.

TransCanada & co. violate tribal sovereignty, illegally poisoning the land & water of tribes in Canada & the US, and aim to bulldoze right through sacred sites.

TransCanada claimed Keystone 1 would have 1 spill every 7 years. Instead, it had 12 in its first year. All pipelines spill, and Keystone XL will run over the Oglala Aquifer, which gives water to farmers in the Midwest and in New Mexico too. Contaminating it would be a disaster, and the Keystone is built to spill.

The pipeline won't even lower unemployment or gas prices. The oil would go overseas, raising prices here, and killing more jobs than the 3k low-wage temp jobs it would make.

A far better path is more efficiency and a real switch to clean, renewable energy. This is safer, creates fair jobs, addresses climate chaos, and respects people & the earth. But it won't happen without fighting the 1% who get rich by ruining the earth for the rest of us.

Come to a General Assembly, and build your world.
